Cheat sheets, Practice Exams and Flash cards  [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

## What is an Application Programming Interface (API)?

An API is software that allows two applications/services to talk to each other.

The most common type of API is via HTTP/S requests.

AWS API is an HTTP API and you can interact by sending HTTPS requests, using an application interacting with APIs like **Postman**.

Each AWS Service has its own **Service Endpoint** which you send requests

GET / HTTP/1.1  
host: **monitoring.us-east-1.amazonaws.com**  
x-amz-target: GraniteServiceVersion20100801.GetMetricData  
x-amz-date: 20180112T092034Z  
Authorization: **AWS4-HMAC-SHA256 Credential=REDACTEDREDACTED/20180411/.....**  
Content-Type: application/json  
Accept: application/json  
Content-Encoding: amz-1.0  
Content-Length: 45  
Connection: keep-alive

To authorize use you will need generate a **signed request**  
You make a separate request with your AWS credentials and get back a token.

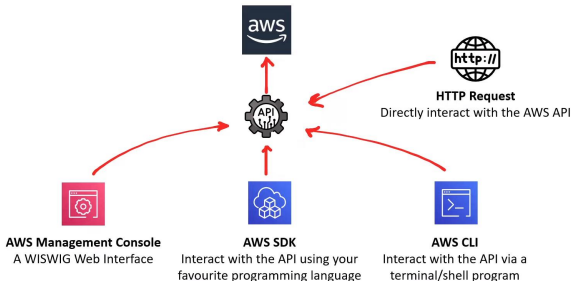

You need to also provide an **ACTION**  
and accompanying **parameters** as the payload

Rarely do users directly send HTTP requests directly to the AWS API.  
Its much easier to interact with the API via a variety of Developer Tools

# AWS Management Console

Cheat sheets, Practice Exams and Flash cards  [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

The AWS Management Console is a **web-based** unified console

**Build, manage, and monitor everything** from simple web apps to complex cloud deployments.

Point and Click to manually launch and configure AWS resources with limited programming knowledge.

This is known as “**ClickOps**” since you can perform all your system operations via clicks.

The AWS Management Console is located at: [console.aws.amazon.com](https://console.aws.amazon.com)

# AWS Management Console – Service Console

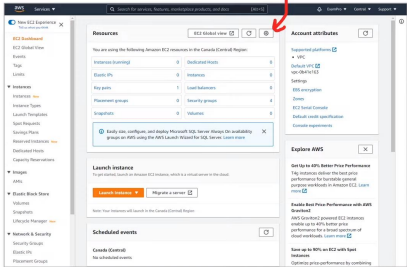

Cheat sheets, Practice Exams and Flash cards [www.exampuro.co/clf-c01](http://www.exampuro.co/clf-c01)

AWS Service each have their own customized console.

You can access these consoles by **searching** the service name.

The **EC2 Console**

Some AWS Services Console will act as an umbrella console containing many AWS Services: eg

- VPC Console
- EC2 Console
- Systems Manager Console
- SageMaker Console
- CloudWatch Console.

# AWS Account ID

Cheat sheets, Practice Exams and Flash cards  [www.examprom.co/clf-c01](http://www.examprom.co/clf-c01)

Every AWS Account has a unique Account ID.

The **Account ID** can be easily found by dropping down the current user in the Global Navigation

The AWS Account ID is composed of 12 digits eg:

- 123456789012
- 121212121212
- 498241098510

The AWS Account ID is used

- when logging in with a non-root user account.
- Cross-account roles
- Support cases

Sign in as IAM user

Account ID (12 digits) or account alias

121212121212

IAM user name

Password

☐ Remember this account

A red arrow points from the text 'The AWS Account ID is used' to the 'Account ID' input field.

It is generally good to keep your Account ID private as it is one of many components used to identity an account for attack by a malicious actor.

# AWS Tools for PowerShell

Cheat sheets, Practice Exams and Flash cards [www.examprom.co/clf-c01](http://www.examprom.co/clf-c01)

## What is PowerShell?

**PowerShell** is a task automation and configuration management framework.

A **command-line shell** and a **scripting language**.

Unlike most shells, which accept and return text, PowerShell is built on top of the .NET Common Language Runtime (CLR), and accepts and returns .NET objects.

```

**AWS Tools for PowerShell** lets you interact with the AWS API via PowerShell Cmdlets

# Amazon Resource Name (ARNs)

Cheat sheets, Practice Exams and Flash cards [www.exampor.co/clf-c01](https://www.exampor.co/clf-c01)

**Amazon Resource Names (ARNs)** uniquely identify AWS resources.

ARNs are required to specify a resource unambiguously across all of AWS

The ARN has the following  
**format variations** 

arn:*partition:service:region:account-id:resource-id*

arn:*partition:service:region:account-id:resource-type/resource-id*

arn:*partition:service:region:account-id:resource-type:resource-id*

## Partition

- aws - AWS Regions
- aws-cn - China Regions
- aws-us-gov - AWS GovCloud (US) Regions

## Resource ID

Could be a number name or path:

- user/Bob
- instance/i-1234567890abcdef0

## Service – Identifies the service

- ec2
- s3
- iam

In the AWS Management Console its common to be able to copy the ARN to your clipboard

## Region – which AWS resource

- us-east-1
- ca-central-1

## Account ID

- 121212121212
- 123456789012

arn:aws:s3:::my-bucket

Name	my-webserver-alb
ARN	arn:aws:elasticloadbalancing:us-east-1:123456789012:loadbalancer/app/my-webserver-alb/31e9d2ce26643cd8  Copied

# Paths in ARNs

Cheat sheets, Practice Exams and Flash cards 📄 [www.exampor.co/clf-c01](https://www.exampor.co/clf-c01)

Resource ARNs can include a path

Paths can include a wildcard character, namely an asterisk (\*)

## **IAM Policy ARN Path**

`arn:aws:iam::123456789012:user/Development/product_1234/*`

## **S3 ARN Path**

`arn:aws:s3:::my_corporate_bucket/Development/*`

Cheat sheets, Practice Exams and Flash cards [www.exampopro.co/clf-c01](http://www.exampopro.co/clf-c01)

## What is a CLI?

A Command Line Interface (CLI) **processes commands to a computer program in the form of lines of text.** Operating systems implement a command-line interface in a shell.

## What is a Terminal?

A terminal is a text only interface (input/output environment)

## What is a Console?

A console is a physical computer to physically input information into a terminal

## What is a Shell?

A shell is the command line program that users interact with to input commands. Popular shell programs:

- **Bash**

People commonly (erroneously) use **Terminal, Shell or Console** to generally describe interacting with a Shell.

# AWS Command Line Interface (CLI)

Cheat sheets, Practice Exams and Flash cards  [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

AWS Command Line Interface (CLI) allows users to programmatically interact with the AWS API via entering **single or multi-line commands** into a shell or terminal

```
aws ec2 describe-instances \
--filters Name=tag-key,Values=Name \
--query 'Reservations[*].Instances[*].
{Instance:InstanceId,AZ:Placement.AvailabilityZone,Name:Tags[?
Key=='Name' ][0].Value}' \
--output table
```

us-east-2a	i-027552a73f021f3bd	test-server-2

The AWS CLI is a Python executable program.

- Python is required to install AWS CLI

The AWS CLI can be installed on Windows, Mac or Linux/Unix

The name of the CLI program is **aws**

# AWS Software Development Kit (SDK)

Cheat sheets, Practice Exams and Flash cards 📄 [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

A Software Development Kit (SDK) is **a collection of software development tools** in **one installable package**.

You can use the **AWS SDK** to programmatically create, modify, delete or interact with AWS resources.

    aws_access_key_id,
    aws_secret_access_key
  )
})
bucket = s3.bucket s3_bucket
file = File.open file_path
md5 = Digest::MD5.hexdigest file.read
md5 = Base64.encode64([md5].pack("H*")).strip

attrs = {
  key: data["path"],
  body: IO.read(file),
  content_md5: md5
}
resp = bucket.put_object(attrs)
```

# Infrastructure as Code (IaC)

Cheat sheets, Practice Exams and Flash cards 📄 [www.exampro.co/clf-c01](https://www.exampro.co/clf-c01)

## Infrastructure as Code (IaC)

You write a configuration script to **automate** **creating, updating or destroying** cloud infrastructure.

- IaC is a **blueprint** of your infrastructure.
- IaC allows you to easily **share, version or inventory** your cloud infrastructure.

AWS has two offerings for writing Infrastructure as Code.

### AWS CloudFormation (CFN)

CFN is a Declarative IaC tool

#### Declarative

- What you see is what you get. **Explicit**
- More verbose, but zero chance of mis-configuration
- Uses scripting languages eg. JSON, YAML, XML

### AWS Cloud Development Kit (CDK)

CDK is an Imperative IaC tool.

#### Imperative

- You say what you want, and the rest is filled in. **Implicit**
- Less verbose, you could end up with misconfiguration
- Does more than Declarative
- Uses programming languages eg. Python, Ruby, JavaScript

# CloudFormation

Cheat sheets, Practice Exams and Flash cards  [www.examprom.co/clf-c01](http://www.examprom.co/clf-c01)

AWS CloudFormation allows you to write Infrastructure as Code (IaC) as either a JSON or **YAML** file. 

CloudFormation is simple but it can lead to large files or is limited in some regard to creating dynamic or repeatable infrastructure compared to CDK.

CloudFormation can be easier for DevOps Engineers who do not have a background in web programming languages.

Since CDK generates out CloudFormation its still important to be able to read and understand CloudFormation in order to debug IaC stacks.

```
Ec2Instance:
  Type: AWS::EC2::Instance
  Properties:
    ImageId:
      Fn::FindInMap:
        - "RegionMap"
        - Ref: "AWS::Region"
        - "AMI"
    KeyName:
      Ref: "KeyName"
    NetworkInterfaces:
      - AssociatePublicIpAddress: "true"
        DeviceIndex: "0"
        GroupSet:
          - Ref: "myVPCEC2SecurityGroup"
        SubnetId:
          Ref: "PublicSubnet"
```

# Cloud Development Kit

Cheat sheets, Practice Exams and Flash cards 📄 [www.examprom.com/cif-c01](https://www.examprom.com/cif-c01)

AWS CDK allows you to use your favorite programming language to write Infrastructure as Code (IaC)

```
const bucket = new Bucket(this, 'MyBucket');
const result = bucket.addToResourcePolicy(new iam.PolicyStatement({
  actions: ['s3:GetObject'],
  resources: [bucket.arnForObjects('file.txt')],
  principals: [new iam.AccountRootPrincipal()],
}));
```

- CDK is powered by CloudFormation (it generates out CloudFormation templates)
- CDK has a large library of reusable cloud components called CDK Construct <https://constructs.dev>
- CDK comes with its own CLI
- CDK Pipelines to quickly setup CI/CD pipelines for CDK projects
- CDK has a testing framework for Unit and Integration Testing

AWS SDK looks similar, but the key difference is CDK ensures Idempotent of your Infrastructure

# Access Keys

Cheat sheets, Practice Exams and Flash cards  [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

**Access Keys** is a **key and secret** required to have programmatic access to AWS resources when interacting with the AWS API outside of the AWS Management Console

An Access Key is commonly referred to as **AWS Credentials**

A user must be **granted access** to use Access Keys

Select AWS credential type\*

**Access key - Programmatic access**

Enables an **access key ID** and **secret access key** for the AWS API, CLI, SDK, and other development tools.

**Password - AWS Management Console access**

Enables a **password** that allows users to sign-in to the AWS Management Console.

- Never share your access keys
- Never commit access keys to a codebase
- You can have two active Access Keys
- You can deactivate Access Keys
- Access Keys have whatever access a user has to AWS resources.

**Generate** an Access Key and Secret

Access key ID	Secret access key
AKIAZRJIQN2ODG55TBXO	jzXt1gj1PE1f/y9k5JVI2TnvvQ6CSwanzg8aUP3O <a href="#">Hide</a>

# Access Keys

Cheat sheets, Practice Exams and Flash cards  [www.exampor.co/clf-c01](http://www.exampor.co/clf-c01)

Access Keys are to be store in ~/.aws/credentials and follow a TOML file format

**Default** will be the access key  used when no profile is specified.

You can store multiple access  keys by giving the **profile** names.

```
[default]
aws_access_key_id=AKIAIOSFODNN7EXAMPLE
aws_secret_access_key=wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY
[exampro]
aws_access_key_id=AKIAIOSFODNN7EXAMPLE
aws_secret_access_key=wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY
region=ca-central-1
```

You can use the **aws configure**  CLI command to populate the credential file.

```
$ aws configure
AWS Access Key ID [None]: AKIAIOSFODNN7EXAMPLE
AWS Secret Access Key [None]: wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY
Default region name [None]: us-west-2
Default output format [None]: json
```

The AWS SDK will automatically read from these environment variables.

This is the safe way of using an Access Key within your code.

```
$ export AWS_ACCESS_KEY_ID=AKIAIOSFODNN7EXAMPLE
$ export AWS_SECRET_ACCESS_KEY=wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY
$ export AWS_DEFAULT_REGION=us-west-2
```
